Frappe Services

ERPNext is comprehensive...

Finance and Accounting
- Financial statements
- Taxation and compliances
- Journal entry
- Accounting dimensions
- AP and AR
- Customizable GL
- Cost centers, Budgets
- Payment and Bank recon
- Asset management

Manufacturing
- Multi-level BOM
- Production planning
- Capacity planning
- Work order assignment
- Workstation, Operations, Routing
- Make-to-order, Make-to-stock
- Engineering manufacturing
- Subcontracting
- Quality inspection

Sales and CRM
- Lead and Opportunity
- Multi-territory sales
- SLA management
- Quotation, Order, Contract
- Price lists, price rules
- Promotions, discount
- POS, Warranty and AMC
- Customer newsletters
- Dropshipping

Stock
- Item management: Group, Variants
- Alternates, HSN, Price lists, rules
- Shelf life, Batch, and Serial
- Warehouse bin management
- Picklists
- Automatic stock replenishment
- UoM conversion, Landed cost

Procurement
- Purchase planning
- RFP, Supplier quotation, requisition
- PO, GRN, Purchase Invoice
- Vendor portal and onboarding
- Supplier scorecards
- Supplier portal
- Subcontracted purchase

Project Management and Support
- Task Management
- Gantt Charts
- Resource Allocation
- Time Tracking
- File Sharing, Collaboration Tools
- Project based stock tracking
- Milestone based billing

Frappe

...powerful...

API-first
Ease of integrations with external systems

100% Mobile Friendly
All modules can be managed from a handheld or phone

Roles & Permissions
Manage granular permissions (eg. DocType field level)

Approval Workflows
Easy to build multi-level approvals

Customizable Reports
Download any report, standard or custom on your own

Multi-Subsidiary
Manage multiple entities within a group company

Multi-Currency
Multi-currency accounting and reporting

Document Management
Version controlled, centralised repository of documents

Frappe

…and the most agile ERP on the planet

Framework

Low code, open source, web framework in Python and Javascript for the 21st century

Ready Integrations

Frappe comes with 130+ out of the box integrations with banks, messaging apps, e-commerce apps like shopify and more
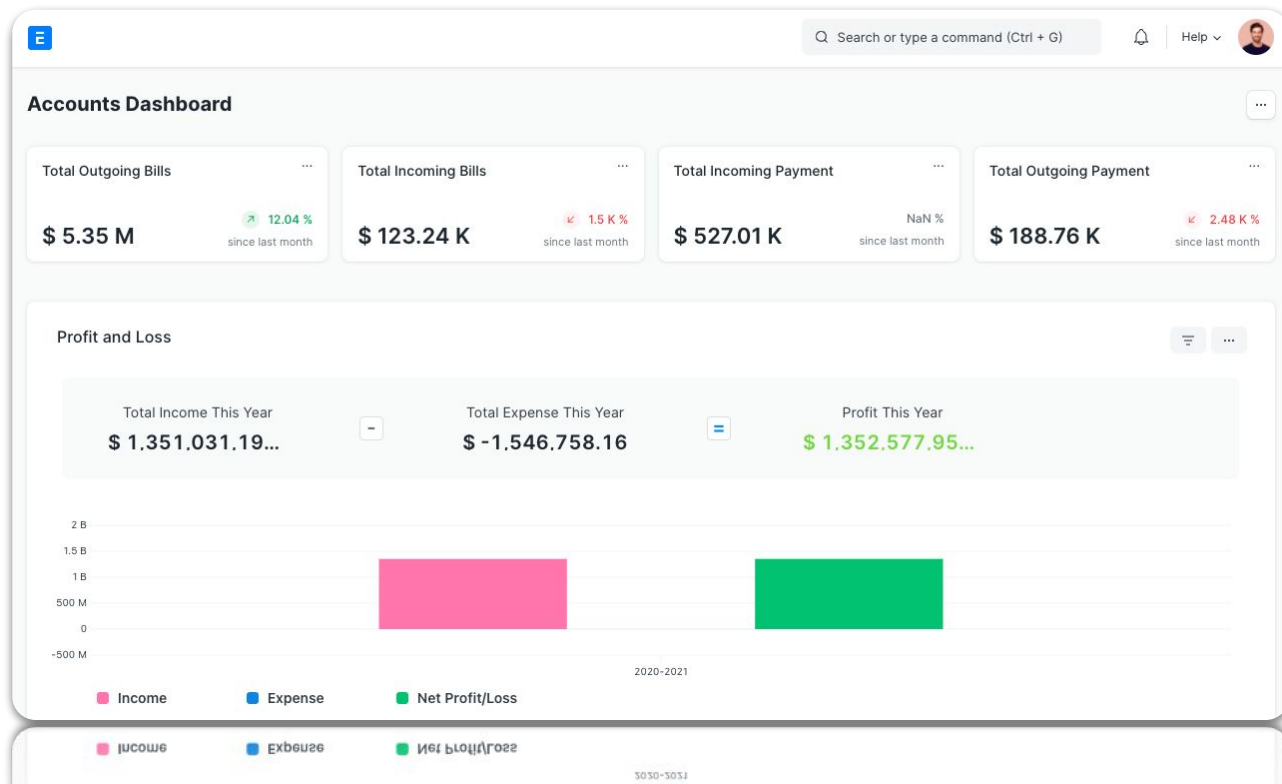

Scalable

Interoperable nature allows for effortless scalability to accommodate growth and increased demand

Frappe

User-friendly

Simple. Intuitive. Works anywhere

'0' licensing fees lowers total cost of ownership

Software costs don't grow linearly as you grow

	Annual Pricing for 100 users (in USD)	Annual Pricing for 500 users (in USD)
ERPNext **No licensing fees (Estimated hosting cost)**	$3,000[1]	$5,000[2]
Odoo $14/user/month	$18,000	$90,000
ZohoOne $50/user/month	$60,000	$300,000
Microsoft Dynamics $100/user/month	$117,795	$580,000
SAP B1 Professional $108/user/month	$130,000	$650,000

1. 100 Users typically need dedicated server with 2 vCPUs, 4GB memory, 25 GB storage. Includes 1st party product warranty
2. 500 Users typically need dedicated server with 2 vCPUs, 16GB memory, 50 GB storage. Includes 1st party product warranty

Frappe Services

"Frappe Framework eliminates 97.42%* software development effort".

* Learn how Frappe powers Zerodha back-office platform

Frappe

Essential modules to build apps faster

Admin User Interface
Rich single page application (SPA) with built in forms, list, search and navigation

Roles and Permissions
User roles and permissions that are applied out of the box on all interactions

REST API + Webhooks
REST API and Webhooks on all models based on authentication

Job Scheduler
Configure background workers and run periodic tasks powered by Python RQ
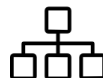

Socket.io
First class socket.io support based on NodeJS and using Redis pub-sub.

Email Setup
Send, receive, view and manage emails using SMTP and IMAP based email accounts

Multi-tenant
Multi-tenant architecture easily lets you host multiple sites on a single server

Meta-data first
DocTypes can be defined easily without code used everywhere

**Frappe**

Build products or internal apps

Product Development

Build powerful software products faster

Focus on the core business problems and leave the rest to Framework

Eg. GoldSetu, Jeweller's platform
OneFM, Facility Management,
Ury, Simplified restaurant operations

Internal Apps and Workflows

Automate business processes or build custom apps

Eliminate dependency or integrate with 3rd party SaaS products

100s of companies like Zerodha, Elastic Run, OneCard have automated internal operations with Framework

Frappe Marketplace Apps

Build and monetize specialised apps on Frappe Marketplace

Build for local taxation, payment integration, communication channel etc

Successful apps
India Compliance (11k Installs)
POS Awesome (2K Installs)
Ecommerce integrations (2.5K Installs)

trainings for everyone

Frappe Cloud features

Specialised

Evolved over 15 years of experience, specially built for **containerised** Frappe deployments at scale

Multi-tenant

Deploy and manage **multiple clusters, servers, benches and sites**. Manage multiple deployments, versions and apps

Compute-based

Pricing based on compute and not users, leading to **savings**; compared to both licensed apps and 3rd party clouds

User-friendly

A sleek UI that simplifies frequent hosting tasks with a **few clicks**. Simplicity in debugging, upgrades and more

Flexible infrastructure

Opt for Frappe hosting or **Hybrid Hosting –** with all the benefits of Frappe Cloud on your own servers

Trusted by thousands

8000+ sites on **250+ servers** across **10 regions.** Serving industries across manufacturing, services, distribution, etc

Frappe

Frappe Cloud benefits

Support

Peace of mind with hosting support and **Frappe support** for first-party apps like ERPNext, FrappeHR and Framework

Productivity

Move from error prone and long hours of installations, tedious upgrades and backups to Frappe Cloud for **30-40% boost in developer productivity**

Security

Enterprise-grade security at multiple levels – OS, Network, App, DB and more. ISO 27001 and GDPR compliance

Scalability

Scale infra in few clicks. **Optimise resource utilisation** with slow query logs, indexing, code refactoring, staging tables and more

Reliability

99.9% uptime. Regular incident tracking and fixes. Frappe engineers detect and fix issues before you know it

Why Frappe Cloud is better than Self-hosting

Benefits	Self Hosted (Eg. AWS, Digital Ocean)	Frappe Cloud
Easy Deployment	❌ Install and deploy with Linux Shell	✅ UI based containerised deployments
Automated Upgrades to Frappe Apps	❌ No	✅ Yes, easy and assisted upgrades
Automated Backup and recovery	❌ No, Manual and error prone	✅ Automated backups and recovery
Automated Logs and monitoring	❌ Manual configuration	✅ Automated and always on
Centralized database for multi-tenant deployments	❌ No	✅ Yes
Centralized access control	❌ No	✅ Yes, Team level permissions and key based SSH access control
Best practices and pre-configures DevOps	❌ You setup your own devops practices	✅ Preconfigured best practices

Frappe

Enterprise-grade security

Open source

One of the top reasons for enterprises to adopt open source software is security and ability to own your data. Like Linux, more contributors means enhanced security

ISO 27001; GDPR compliant

We committed to preserve the confidentiality, integrity and availability and privacy.
ISO 27001 →
GDPR →

Access Control and Logs

Frappe Cloud is equipped with granular access controls. Plus every database or application activity is logged for audit and analysis.

Virtual Private Cloud

Proxy server ensures restricted access to the application servers. With clusters, you also get an isolated virtual network with VPN level controls

Managed security upgrades

Frappe Cloud underlying infra, OS and technologies like database go through regular upgrades and is at par with the latest security upgrades

Internal security policies

Frappe deploys internal security measures such as responsible disclosures, regular hardening, periodic VAPT assessments to detect and fix vulnerabilities

Powered by AWS

Frappe Cloud servers are built on top of AWS and OCI, hence all the security benefits (eg. DDOS) are extended to our customers

Application security

Frappe apps (like ERPNext) are equipped with 2FA, IP restriction, granular (field-level) roles and permissions, advanced audit trail, provided added layer of security

Customers talk

This has saved us a lot of time which would have been spent if we would have built something like this from scratch. This represents a significant boost in productivity.
We have also used frappe extensively to build several micro services internally. Frappe has streamlined the business development process for us and made the UI and UX consistent across our internal applications.

— Kailash Nadh, CTO at Zerodha

Seemed very simple, neat and consistent UI in the beginning. As we deep dived, we found the framework underneath is even better and the customisation options were very neatly modeled in the entire package. We loved the entire notion of DocType and everything built around/on-top of that. The Tooling framework of "bench" makes it extremely easy for admin activities.

— Shitiz Bansal, Co-founder and CTO at Elastic Run

"Technology-wise ERPNext is one of the most sound products I have encountered yet. It continues to amaze us as we keep discovering more and more things that ERPNext helps us accomplish. I am happy with the entire product since I've seen it develop over the previous seven years, and the transformation is admirable. I'd like to anticipate that over the next seven years, ERPNext will continue to grow and rank among the top ERPs."

— Vishal Singh, Director of Operations, Banaraswala Wire Mesh

"The reason we are using ERPNext is because it is feasible option for business of our size and it's scalable & grows with our business & also gives stability to customize it to our needs"

— Maya Krumins, Digitales, Australia
